One Investor, One AI: Roadmap for the Investment Desk

Operating Architecture, Specialist Agent Matrix, and Three-Year Phased Implementation for the 2030 Portfolio Manager

CORE FIDUCIARY PRINCIPLE

AI eliminates mechanical assembly friction; investment conviction remains strictly human.

The desk of 2030 is not fewer investors—it is investors operating with zero data collation drag, zero blind spots in continuous monitoring, and an omnipresent institutional red team on call.

PREPARED FOR
Executive Leadership Workshop (Geneva)

AUDIENCE
Sébastien Eisinger, Mary-Therese, Philippe, Olivier

AUTHOR
Reza Karim, Senior Investment Manager

DATE OF EXECUTIVE SESSION
15 October 2026

CLASSIFICATION
Strictly Private & Confidential

GOVERNANCE LINKAGE
Firm-Wide Operating Model Charter (2030)

1. The Vision: Personal Chief of Staff

The core vision for the 2030 investment platform is radical augmentation: **every investor on the platform is equipped with a dedicated Master AI that acts as their personal Chief of Staff.**

This Dedicated Orchestrator maintains persistent memory of the investor's coverage universe, portfolio holdings, investment philosophy, risk tolerance, and qualitative preferences. It coordinates specialized agents on their behalf, structures the daily analytical workflow around portfolio catalysts, and monitors active risk perimeters continuously.

> **THREE QUESTIONS THE AI ANSWERS CONTINUOUSLY**
>
> - **1. Coverage Drift:** *What happened in my coverage universe while I was away, and why does it matter?* — Surfaces only disclosures that alter live thesis assumptions; compiles source-linked dossiers in seconds.
> - **2. Real-Time Mandate & Risk:** *What does my portfolio look like right now against my thesis, my risk limits, and my client mandate?* — Checks position drift, rating migrations, liquidity buffers, and stress tests continuously.
> - **3. Dynamic Action Agenda:** *How should my day, week, and month be organized to deliver my investment goals?* — Restructures calendars around urgent catalysts; pre-generates briefing packs before management meetings.

2. Ten Practical Tasks: How AI Supports the Investment Desk

Rather than relying on a generic chatbot, the investment desk organizes AI support around **ten practical daily tasks** across three core areas: discovery, company research, and portfolio checks. Every task runs under explicit human direction and strict compliance limits:

Group 01: Market & Idea Discovery

- **01. Idea Screening:** Continuously checks global universes against fund criteria; presents ranked candidates with cited evidence.
- **02. News & Filings:** 24/7 watch of global newswires, local filings, and broker research; surfaces only events touching active holdings.
- **03. Market Data:** Synthesizes real-time price action, sovereign/corporate spreads, CDS, and liquidity depth from market feeds.

Group 02: Company Research & Review

- **04. Company Dossiers:** Assembles source-linked dossiers on corporate and sovereign credits in minutes (debt waterfalls, covenants, filings).
- **05. Meeting Notes:** Attends committees, broker briefings, and company meetings; records minutes, action items, and institutional memory.
- **06. Draft Reports & Packs:** Prepares briefing packs and Investment Committee papers directly from verified institutional knowledge.

Group 03: Portfolio & Risk Checks

07. Position Monitoring: Tracks positions, exposures, and limit proximity; flags immediately when incoming facts alter a live investment case.

08. Performance Checks: Continuously links portfolio performance to specific decisions, isolating alpha drivers from factor tailwinds.

09. Risk & Stress Tests: Conducts on-demand factor stress tests, crowding diagnostics, and correlation break warnings outside the model.

10. Peer & Fund Flows: Tracks competitor fund positioning, ETF flow migrations, and regulatory filings to transform anecdote into intelligence.

FIGURE 2.1: TEN PRACTICAL TASKS: HOW AI SUPPORTS THE INVESTMENT DESK ACROSS DISCOVERY, RESEARCH, AND RISK

3. The Investment Process: Today vs. AI-Enabled

The fundamental goal of the operating model is the **85/15 capacity reallocation**: reversing the historical operational friction where analysts spend 85% of their working hours on mechanical collation, leaving only 15% for genuine analytical thought and investment debate.

WORKFLOW DIMENSION	CURRENT OPERATING MODEL (MANUAL FRICTION)	2030 AI-ASSISTED DESK (DIRECT ANALYSIS & JUDGEMENT)
Idea Generation	Manual screening across fragmented terminals; narrow coverage per analyst.	Continuous 24/7 universe screening; ranked candidates surfaced with pre-attached evidence.
Primary Research	2–3 days downloading 200p prospectuses and copy-pasting numbers before analysis starts.	Source-linked company and sovereign credit dossiers delivered in minutes.
Portfolio Monitoring	Hours lost every morning skimming email noise and unstructured news headlines.	Curated pre-market briefing delivered on material thesis shifts touching the active book.
Attribution & Feedback	Monthly backward-looking accounting reviews; assumptions disconnected from outcome.	Continuous, decision-linked feedback; immediate alerts when thesis assumptions break.
Institutional Memory	Insights and meeting notes trapped in personal inboxes; lost upon staff departure.	Permanent, firm-wide knowledge graph indexed by company, sovereign, and mandate.

4. Implementation Roadmap: Three Practical Horizons

Rollout follows a disciplined stage-gate methodology over 36 months. Concurrency is earned on evidence: each phase operates within fixed 90-day timeboxes with explicit stage-gate pass criteria before funding release:

HORIZON 1: ASSISTANTS (0–12 MONTHS)

Operating Standard: On-Demand Help (Human-Pulled).
On-demand research Q&A over approved sources, piloted daily morning brief, automated first drafts of meeting notes and company dossiers. The investor asks for help; nothing is pushed without permission.

Stage-Gate 1 Threshold: Working proof on live data; data connections validated; user trust established.

HORIZON 2: BACKGROUND CHECKS (12–24 MONTHS)

Operating Standard: Automated Alerts for Active Holdings.
24/7 background monitors push alerts tied strictly to active investment theses. Decision-linked attribution engine live. Alert quality audited ruthlessly: tools that cause false alarms are paused.

Stage-Gate 2 Threshold: False-positive alert rate under strict ceiling; active desk adoption verified.

HORIZON 3: INTEGRATED DESK ASSISTANT (24–36 MONTHS)

Operating Standard: One Assistant per Investor.
Each investor gains an integrated AI assistant that coordinates routine tasks across screening, filings, and stress tests on their behalf, maintaining persistent context of the fund's strategy. Safeguards operate strictly within external limits with a full audit trail.

Stage-Gate 3 Threshold: Model risk clearance, enterprise compliance audit pass, and tested operational fallback.

5. Fiduciary Non-Negotiables & Firm-Wide Governance

WHAT DOES NOT CHANGE

The decisions, the accountability, and the client's trust remain 100% human.

AI multiplies what each investor can see, test, and monitor; it does not replace the investing. Autonomous trade execution and movement of client assets are strictly excluded. The desk of 2030 is not fewer investors—it is investors with no assembly drag, no blind spots in monitoring, and an unyielding commitment to client outcomes.

Connection to the Firm-Wide Operating Model Charter

This roadmap represents the investment-desk expression of the firm-wide 2030 Charter. Every pilot project initiated under this roadmap adheres to the mandatory **Five-Party Pact** (User, IT, Risk & Compliance, Management, Project Manager) and delivers within 90-day timeboxed cadences.
